

Boat Shop (Schuylkill Paddles)

Boat Shop Prompt: At the Drexel Summer Program for Interior and Architectural Design, small groups, one including me, were given a prompt like kayaks and canoes, running, yoga, music, art, etc. Our group got the kayaks and canoes topic in a location right on the Schuylkill River. Then, we were told to make a logo, shop name, two words that resembled the aesthetic of our store (mine were Ambitious Reassurance), a materials board, color collage, parti sketches, 3D hand-cut parti, sketchup model (then rendered by enscape), and finally a 3D laser cut model. This project was called Schuylkill Paddles. Even though we were in a group, these specific assignments were all done independently. We were each later judged by a professional jury at the end of the program.

Parti sketch and 3D model for Schuylkill Paddles Project

The parti sketch and hand-cut model were part of the Schuylkill Paddles Prompt but for these specific things, we were first instructed to draw out shapes that reminded us of the words (Ambitious Reassurance - I chose these words because it consisted of the feeling of hopefulness like you can do anything you put your mind to, reassurance, and ambitious because I want the people who entered my store to feel like they can try new things that maybe they aren't comfortable with yet) and prompt of our store, which led to the sketch I made. Then, I hand-cut and glued every part of the 3D parti model after drawing out the sketch of the general idea of what I wanted it to look like.
